

Skin Cancer Screening

Saving lives can be as simple as the ABC's

Sign	Not Normal Refer to Doctor	Characteristic
A Asymmetry		When you draw an imaginary line through the center and the halves are not the same
B Borders		The edges are uneven, ragged, notched or blurred
C Color		When the color is not the same throughout
D Diameter		The size is larger than a pencil's eraser

Cancers of the ear if unrecognized can be deadly. You should not ignore any of the following:

**A bleeding area, areas that have not healed, scaly or crusted areas,
a scab, rough spot, scar, sore, lump or bump**

If you see any of the above, see a Dermatologist
